

DRAGGTEC

UPGRADE YOUR EFFICIENCY. SIMPLIFY YOUR WORKFLOW.

***Smooth driveways, seamless journeys.
DraggTec is paving the way.***

RUGGED. RELIABLE. VERSATILE.

Built for Public Works. Proven by Contractors. Trusted by DOTs.

Whether for municipality use, parking lots, or driveways, our drag box - available in our base DraggTec color scheme or a custom color - is up for the task. With multiple add-ons and the ability to set a custom paving thickness, it adapts to your specific needs.

| | |
|-----------------|-----------------|
| STARTING PRICE | \$9,300 |
| WIDTH OPTIONS | 8-12 Feet Wide |
| OPERATING DEPTH | 40 Inches |
| OVERALL DEPTH | 48 Inches |
| HEIGHT | 40 Inches |
| WEIGHT | 1,200-1,600 Lbs |

AVAILABLE ADD-ONS

Available Add-Ons

Our **Metal Dividers** are used to customize the paving width you need.

Our **E-Track** option is the orange metal plating you see. The option comes with: two shovel holders, a pump sprayer holder and two cup holders.

Use our **Custom Color** option to match your branding.

DOT-Grade Results

Uniformity matters for long-term pavement performance. DraggTec ensures consistent layer thickness from start to finish, helping crews meet DOT specifications with ease.

Perfect for: Road shoulders; Approach leveling; Guardrail base prep; Roadside repairs and erosion control; Utility reinstatement; Bike paths; parks; and multi-use trails

Outcome: A smoother, longer-lasting finished surface that meets or exceeds agency standards.

Reduce Material Waste & Stretch Budgets

Material waste is costly — especially for taxpayer-funded agencies. DraggTec optimizes efficiency by controlling placement with precision.

Savings: Reduce material waste by up to 30%; Maximize every bucket of asphalt; Eliminate excess piles that require re-work; Stretch annual budgets further

Built for the Equipment You Already Own

No custom machinery, no attachments, no hydraulics — just hook up and go.

Compatible with: Bobcat, CAT, Case, John Deere, Kubota, New Holland, & all major skid steer brands

Also towable behind a truck for long-distance or shoulder applications.

Rugged Municipal-Grade Construction

Public works projects require durability. DraggTec boxes are built to withstand constant use on road shoulders, job sites, and municipal roads.

Features: All-steel construction; Reinforced frame and pull points; Wear-resistant skid plates; Designed for decades of service; A buy-once, use-for-years investment.

DRAGGTEC

Safer Operations for Road Crews

The faster material is placed, the faster crews can reopen roadways — improving safety for workers and the traveling public.

Safety benefits: Reduced exposure to traffic; Fewer hand tools needed; Lower risk of repetitive-strain injuries; Faster patching and shoulder repairs

Ideal for Labor-Short Cities & Counties

Public Works departments nationwide are dealing with hiring shortages, retirements, and increased demand. DraggTec helps fill the gap.

A crew of two can do what once required five or six — without sacrificing quality.

Multi-Department Versatility

DraggTec serves multiple municipal divisions, increasing the value of a single purchase.

Common uses: Street Maintenance: patching, leveling, shoulder work; Highway Departments: long-pull shoulder rebuilds; Parks & Rec: trails, paths, parking lots; Utility Departments: trench backfill; Stormwater & Drainage: swales, erosion control

Procurement-Friendly for Cities & DOTs

DraggTec is the only manufacturer of asphalt drag boxes designed for skid steers and municipal applications.

Procurement advantages: Qualifies for sole-source purchasing; Eliminates multi-bid requirements; Simplifies acquisitions and budgeting; Ideal for end-of-year or “use-it-or-lose-it” spending cycles

Year-End Budget Optimization

A smart use of remaining funds. Many agencies face “spend it or lose it” budget constraints. DraggTec is an easy-to-justify purchase that improves efficiency, productivity, and safety.

The Bottom Line

A small tool that makes a big difference. DraggTec is more than a drag box - it's a force multiplier for municipal crews. Faster work. Lower costs. Better results. Safer crews. Engineered for public service. Built for the toughest jobs.
